Ant5 PPE®

Protectingpeople EYEWEAR

Company Profile

Sunnergy safety(ANT5PPE brand) are subsidiary of SUNNERGY Group, founded in 2009. We owned 10,000 square meter factory; 20sets injection machine and 100 workers.
(30 for operating the injection machine, 70 for assembling)
Our main market is in North and South America, Europe, Mid-east and Southeast Asian countries.
Our products passed ANSI, CE, and AS/NZS standard.
We have OEM capability, and we are now doing OEM with some world famous brand. ODM is also available.

Every year, SUNNERGY SAFETY developed more than 5 new models and keep best quality products to the market.
We provide a wide range of safety products, which can be used by construction industry, oil and gas, chemical industry, forest protection, power engineering, mine development, mountaineering, adventure, outdoor sports and many other industries.

Our goal is: "To guarantee the millions of workers' life more safety!",
" Your safety, let us do! ",
"To be the top famous brand in all over the world!"
We look forward to working with more OEM/ ODM distributors and partners, to create a better future!

ANT5PPE®:
The key to compliance

ANT5PPE safety eyewear was developed as a natural extension of our core mission: to guarantee the millions of workers' life more safety! To accomplish this, we knew the safety eyewear we designed and manufactured needed to be a product workers would want to wear – PPE that wouldn't get in the way – because we all know the safest PPE is the PPE that's worn. The best way to ensure that eyewear is being worn? Create a product centered on ANT5PPE – which is the key to compliance.

ANT5PPE is comprised of three main factors:

Lenstechnology

The part of eyewear that gets little attention (but can have a significant impact) is the lenses. Proprietary Lens Technology by ANT5PPE provides uncompromised optical clarity. This, combined with maximum impact resistance, makes our lenses top class. ANT5PPE provides uncompromised opticalclarity.This combined with maximum impact resistance, makes our lenses top class.

Coating stechnology

Not all lens coatings are the same. Typical dip coatings don ' t allow the flexibility of anti-fog and scratch resistance to be applied on different sides of the lens. The flow-coating technique used by ANT5PPE allows this flexibility and outlasts all other eyew ear on the market.

Fitarchitecture

We take fit very seriously. Properly-fitting eyewear gives wearers confidence. It protects from dust and debris, is free of pressure points, is lightweight, and doesn' t slip. The right eyewear looks and feels good and is easily compatible with other PPE.

Proper protection with no side effects, this is ANT5PPE

Technical Data

SAFETY GLASSES

Lens List

Clear: The use of either indoors and outdoors, provides impact protection.
Amber: light dark environments, can improve the contrast.
Red: indoor use, can increase the contrast, reducing the brightness of fluorescent and halogen light and will not confuse the color.
Brown, green, brown, gray and reflective mirror surface: outdoor use, light and glare on the glasses to prevent sun damage and relieve fatigue caused no infrared protection.

Transmission graph

Light transmission: through the lens filter after the amount of light reaches the eye
Light absorption: when the light is absorbed through the lens or the process of elimination
Filter lens: is the reduction or elimination of light density and light lenses.
Spectrum covers the UV, visible and infrared radiation
Visible: the human eye can see is the wavelength of 380NM and 760NM of radiation to form
Infrared radiation: refers to the wavelength 760NM to 1000NM type of radiation, or electromagnetic radiation
Ultraviolet radiation: is the wavelength 100NM to 380NM form of radiation or electromagnetic radiation

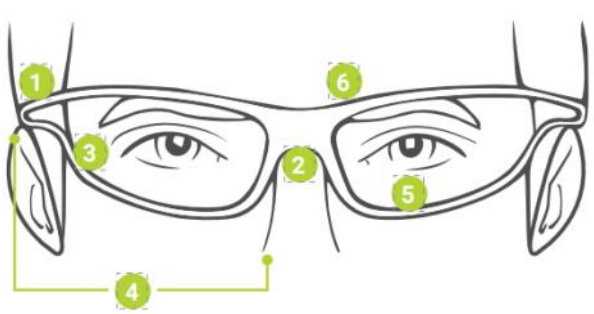
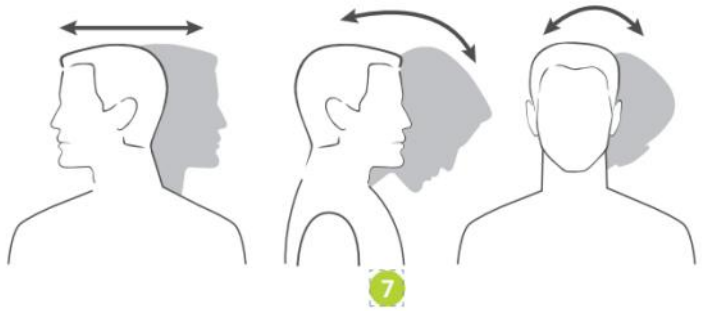
Fit guide

Safety eyewear should never be treated as one size fits all. Simply wearing any generic pair of safety eyewear isn ' t enough to protect your eyes. Yes, it decreases the possibility of an injury. However, if your eyewear fits poorly or incorrectly, you' re putting yourself at a higher risk for injury.

ANT5PPE' s technology allows us to combine soft and hard components into flex frames that make them comfortable and durable yet highly adaptive. They fit to most face widths or shapes – making protection, and compliance an easier endeavor.

To ensure a proper fit, we recommend using our fit guide and reviewing eyewear descriptions and materials.





1. There should be no uncomfortable pressure points on the side of the head or behind the ears.
2. The nose piece should be comfortable and contact your nose without pinching.
3. You should be able to see in all directions without major obstruction.
4. The overall weight of your safety eyewear should be evenly distributed between your ears and your nose so that frames sit comfortably on your face without distracting from tasks.
5. Frames should fit close to the face without hitting your eyelashes. The space around the frames and your face should be less than a pencil width. Gaps of less than or equal to 6-8mm are preferred.
6. Lenses should cover eyebrow and any soft tissue around it.
7. Eyewear should stay in place when you move your head front to back and side to side.

Eye protection standards

More than 2,000 people suffer hospital-worthy eye injuries at work each day. It' s estimated that this represents less than half of all actual incidents. Out of the reported injuries, three out of five injured workers were not wearing eye protection at the time of the accident or were wearing the wrong kind of eye protection for the job (Source: U.S. Bureau of Labor & Statistics, EHS Today). Approximately one in 10 eye injuries require one or more missed workdays to recover. Of those total work-related eye injuries, 10-20% will cause temporary or permanent vision loss.

Eye injuries come at a high cost for workplaces – with U.S. companies having to pay out a combined one billion dollars per year to cover expenses involving hospital bills, insurance, and lost productivity (Source: U.S. Bureau of Labor & Statistics).

Experts believe that the right eye protection could have lessened the severity or even prevented 90% of reported eye injury accidents (Source: Prevent Blindness America).

Eyeglasses are not safety glasses unless both the lenses and the frame follow the compliance specifications laid out for safety eyewear. There are three standards to consider depending on which part of the world you are in:

American ANSI/ISEA Z87.1

The ANSI/ISEA Z87.1 is the standard for safety eyewear in the United States set by the American National Standards Institute (ANSI) along with the International Standards Equipment Association (ISEA). This is also the standard that is incorporated into Occupational Safety and Health Administration (OSHA) regulations for personal protective equipment.

European EN16321

ANT5PPE safety eyewear (frames and lenses) is tested against the European EN16321 standard.

Canadian CSA Z94.3

The CSA Z94.3 standard of safety eyewear relates to eye and face protectors for industrial applications in Canada.

Exceeding the standards

When it comes to protecting workers, our mission isn' t to just meet the standards. We want to exceed them. Our purpose is to provide you with the highest-quality safety equipment in the market, and we do that with our in-house testing methods that go well beyond the required standards. This ensures you' re wearing the best protective product possible.

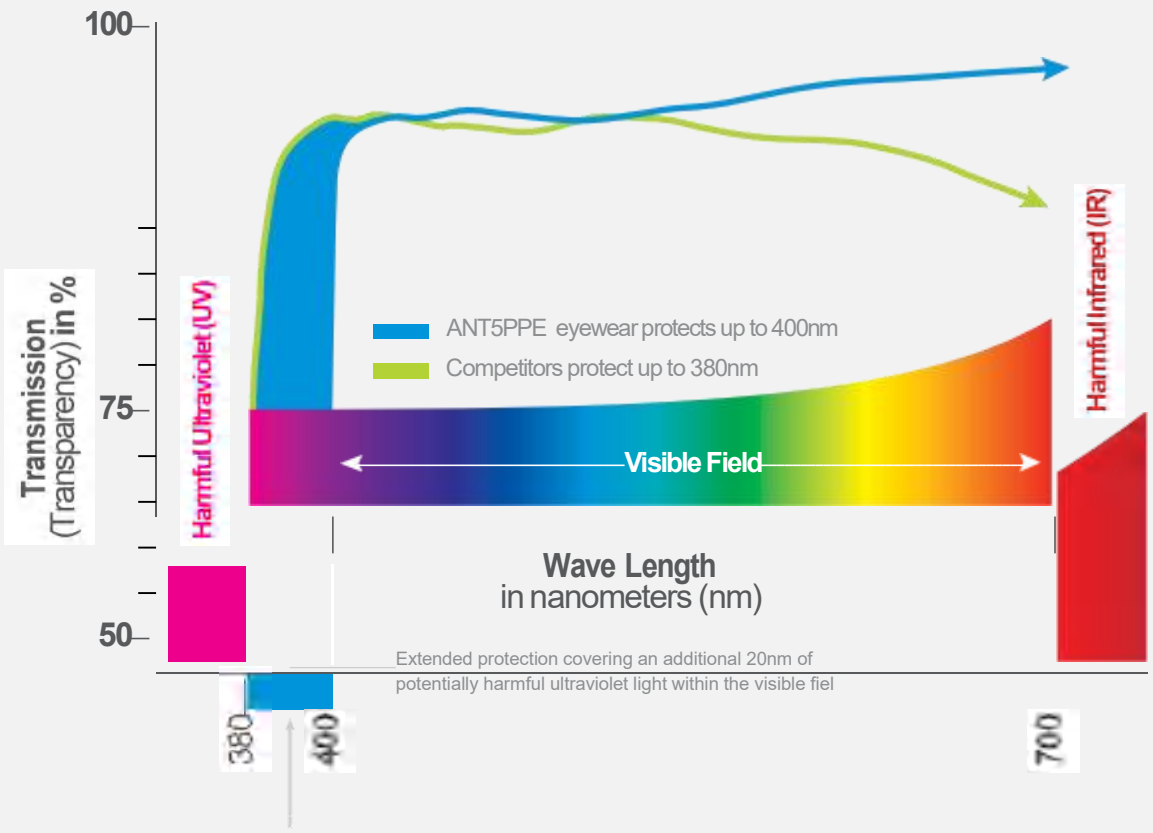
Ultraviolet (UV) protection comparison

All ANT5PPE safety lenses have a direct integration of UV absorption filters to protect 100% of harmful UV rays. ANT5PPE lenses offer 100% UVA, UVB, and UVC protection.



How to care for your eyewear

The number one cause for scratched or underperforming safety eyewear lenses is improper cleaning. Incorrect handling and storage can also cause unnecessary damage to lenses.

Follow these simple care and cleaning steps to increase the life of ANT5PPE safety eyewear:

1 Lightly blow off any loose dirt or debris from your lenses.

2 Risnse your lenses with cool water. ANT5PPE eyewear is engineered to have excess dirt cleanly wash off the lens without sticking.

3 At your ANT5PPE cleaning station, spray the cleaning solution directly onto the lenses.

4 Use a lens-safe tissue (provided at the ANT5PPE cleaning station) to dry and wipe clean.

5 If you're not immediately putting the safety eyewear on store it in a safe spot or in a pouch or case. Never put unprotected safety eyewear in your pocket. If a cleaning station is not available, use a soft, dry microfiber cloth to gently wipe your lenses.

* In addition to properly cleaning, check your safety eyeglasses before you put them on to ensure that the lenses and frames are intact. If anything is defective, replace immediately. Inspection is the first line of protection.

Eyewear customization

Take your team' s safety eyewear to the next level by adding corporate customization. ANT5PPE offers several options to make your company' s eyewear stand out – from printing your logo on the side arms to choosing frames in your company colors.

Frames in your company colors: Make your safety eyewear immediately recognizable by designing frames that incorporate your company colors.

Company name or logo on side arms: Add your company name to the soft components of the side arms for a subtle yet professional look. Or, include your logo in color on the side arms for a distinct, unmistakable corporate identity (pad printing).

Headband embroidery: Customize your safety eyewear by having your corporate logo embroidered on the headband.

Laser engraving on lens: Laser engrave your company name or the names of your team members on the bottom of the lens. Lenses will retain 100% of their functionality even with customized laser engraving.

Interested in customization but unsure what would be best for your company? We' re happy to advise you on the right options for your protective eyewear. Minimums required on all customization options. Please contact our safety solutions specialist for more information.
